

# Emerging Markets Equity Fund

## Objective

Seeks long-term capital appreciation.

## Investment Approach

- Invests in a broad set of companies of all market capitalizations, across emerging market countries and is designed to increase expected returns by overweighting securities trading at lower valuations and with higher profitability ratios.
- Pursues the benefits associated with indexing (diversification, low turnover, transparency of exposures), but with the ability to add value by making investment decisions using information in current prices.
- Efficient portfolio management and trading process that is designed to enhance returns while reducing unnecessary risks and costs for investors.
- Built to fit seamlessly into an investor's asset allocation.

## Performance (%)

CLASS	QTR	YTD	1 YR	3 YR	5 YR	10 YR	SINCE INCEPTION
Institutional	6.65	16.00	26.46	3.00	-	-	7.68
Benchmark	8.24	16.26	25.59	1.01	-	-	5.97

Data as of 9/30/2024. Data presented reflects past performance. Past performance is no guarantee of future results. Current performance may be higher or lower than the performance shown. To obtain performance data current to the most recent month end, please visit [www.avantisinvestors.com](http://www.avantisinvestors.com). Benchmark performance does not represent the fund's performance. It is not possible to invest directly in a benchmark. Investment return and share value will fluctuate, and redemption value may be more or less than original cost. Data assumes reinvestment of dividends and capital gains. Returns for periods less than one year are not annualized.

**A Note About Risk:** International investing involves special risk considerations, including economic and political conditions, inflation rates and currency fluctuations. Investing in emerging markets may accentuate these risks. There is no guarantee that the investment objectives will be met. Dividends and yields represent past performance and there is no guarantee that they will continue to be paid. The information is not intended as a personalized recommendation or fiduciary advice and should not be relied upon for investment, accounting, legal or tax advice. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional instruments. Derivatives can be highly illiquid and difficult to unwind or value, and changes in the value of a derivative held by the fund may not correlate with the value of the underlying instrument. Derivatives are subject to a number of other risks, including interest, market and credit risk.

**You should consider the fund's investment objectives, risks, and charges and expenses carefully before you invest. The fund's prospectus or summary prospectus, which can be obtained by visiting [Avantisinvestors.com](http://Avantisinvestors.com) or by calling 833-928-2684, contains this and other information about the fund, and should be read carefully before investing.**

Institutional class shares are only available for purchase by institutions or other financial intermediaries. Review definitions and minimums for share classes in the fund's prospectus.

**Key Terms: Expected Returns:** Valuation theory shows that the expected return of a stock is a function of its current price, its book equity (assets minus liabilities) and expected future profits, and that the expected return of a bond is a function of its current yield and its expected capital appreciation (depreciation). We use information in current market prices and company financials to identify differences in expected returns among securities, seeking to overweight securities with higher expected returns based on this current market information. Actual returns may be different than expected returns, and there is no guarantee that the strategy will be successful. **Weighted Average Market Capitalization:** The average of the weighted capitalizations of a portfolio's holdings. **Weighted Average Book/Market:** An average book-to-market ratio resulting from the multiplication of each security's book-to-market by its weight in the portfolio. **Weighted Average Profits/Book:** An average profits-to-book ratio resulting from the multiplication of each security's profits-to-book by its weight in the portfolio.
